The Cure For Cancer

Debunking Modern Medicine's "Natural Disease" Theory

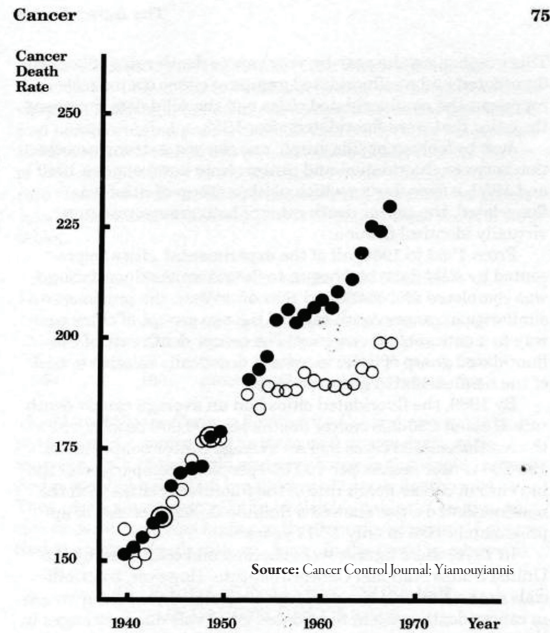

THERE IS A prevailing and assumed belief amongst the general public that the nature and mechanics of cancer are unknown; that a cure is evasive and more research is needed. This assumption is fundamentally false, cancer is actually artificial and man made. Curing cancer is 100% achievable, this is how.

What You **Don't** Need

Contrary to popular belief, curing cancer is not about adding things so much as it is about taking away the things in your life that are carcinogenic. Here is a simplified list of things to avoid.

FOODS:

- BPA plastics¹
 - Try and avoid all plastics, especially those which contain liquid or directly contact foods, unless it has a 'No BPA' label.
- Glucose-Fructose/Aspartame²
 - Both are laboratory manufactured and extremely dangerous. Its in all mass produced juices, candy and grain products.
- MSG, Sodium Nitrate, brominated oils, maleic hydrazide, aluminum, carboxmethylcellulose and propylene glycol³
 - Found in many food, especially those designed to sit on the shelf.
- Hydrogenated Oils/Trans Fat⁴
 - Not as high a cancer factor, but should be avoided.
- Genetically Modified food⁵
 - Most notably and Monsanto products, corn and soy, which cause cancers and actually generationally reduce the size of mice!
- Growth Hormones in meat⁶
 - Most meat in your conventional grocery store has been injected with growth hormone. Hit your local farmers market for fresher meat with fewer, or hopefully no, growth hormones.

The vertical axis represents cancer death rate in terms of deaths per 100,000 population. The horizontal axis represents years from 1940 through 1970. The solid dots represent the year-by-year average cancer death rates of the ten largest cities fluoridated before 1957. The open circles represent the year-by-year average cancer death rate of the ten largest nonfluoridated cities — with comparable cancer death rates during the prefluoridation period (1940-1950) — which had not fluoridated before 1969. Fluoridation of the cities represented by solid dots began between 1952 and 1956. The data were obtained from standard government sources of vital statistics and census figures. (Data were not available for 1951 and 1952.) This graph represents one million cancer deaths, the cancer experience of 18 million Americans over 30 years.

WATER:

- Sodium Fluoride⁷, estrogen, depleted uranium
 - These three substances contribute greatly to cancers, especially in women. Excess estrogen⁸ contributes specifically to cervical and breast cancers⁹. Get yourself a reverse osmosis water filter¹⁰! [foreverhealthywater.com]

AIR:

- Barium, strontium, aluminum and plastic particulates¹¹
 - Not much you can do about this one, but an air filter doesn't hurt.

TECHNOLOGY:

- Fluorescent lights, high concentrations of electricity, cell phones, wi-fi and computer monitors all contribute to cell radicalization¹².
 - Keep your distance at all times.

VACCINATIONS AND DRUGS:

- Avoid all vaccinations and pharmaceutical drugs
 - Vaccines are fundamentally malicious, even considering their intended use: 1967 Ghana 96% of its population was vaccinated against measles. 5 years later they experienced the worst measles outbreak in history, with the highest ever mortality rate¹³. In Oman, between 1988-89 a polio outbreak occurred amongst thousands of vaccinated children¹⁴. This has happened repeatedly throughout history with the most recent being H1N1. The worst cancer causer of them is Gardasil. Cancer causing agents, aborted fetal tissue, mercury and blood have all been found in modern vaccines¹⁵.

What You **Need**

There are some things you can add to your life that will prevent cancer.

VITAMINS AND MINERALS:

- B17
 - This vitamin has been a the center of a long battle against cancer prevention. It has been systematically phase out of our lives despite the amazing results¹⁶. More cancer is more money for the medical industry. You can find this vitamin only in the form of apricot kernel oil.
- Minerals
 - The body requires 60 minerals to function properly, yet only 13 are added back into the soil. The best way to get them back is buying food from smaller farms and by supplementing them¹⁷. These minerals are colloidal, meaning, they are suspended in water, making them usable by the body.

BELIEF:

- Was cancer part of your manifest destiny? Forget all of that garbage, belief in the true God can cure any ailment, including cancer. Give your life to Christ and he will give you his. Read the Bible!
